

Why are trees a part of the solution?

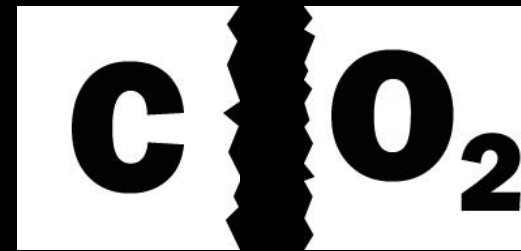

TREES absorb CO_2

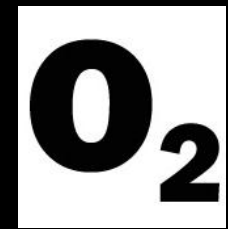

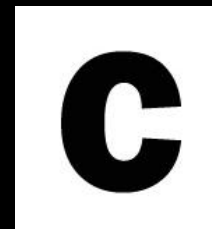

- removing it from the atmosphere

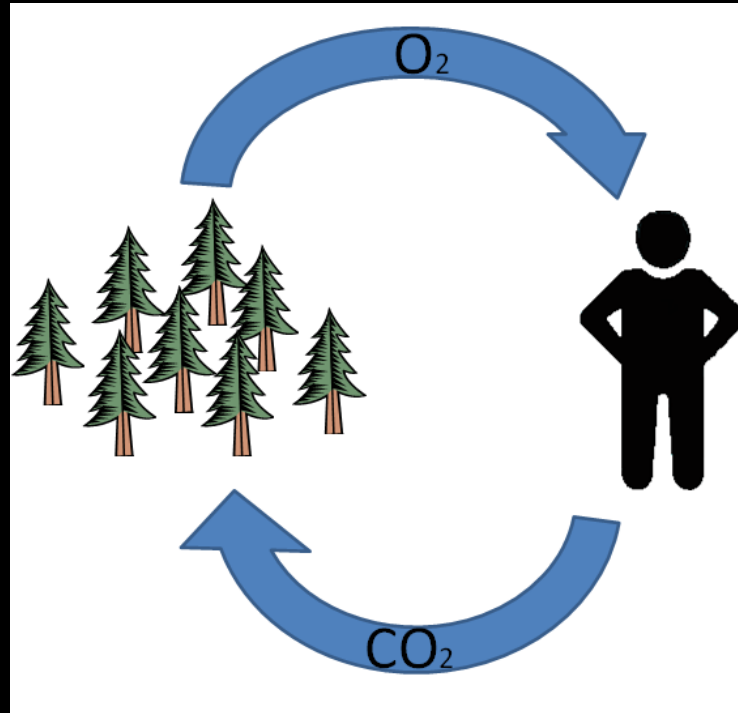

In the leaves
the CO_2 is split

We are left with carbon and oxygen

Trees need **carbon** to grow
We need **oxygen** to breath

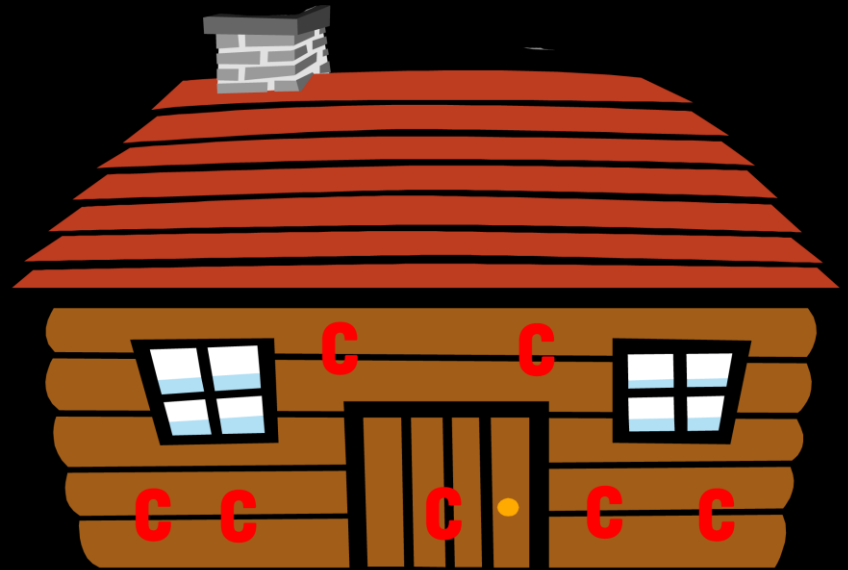

The **photosynthesis** makes this possible

Carbon is
stored in the
trees,
making
trees a
carbon sink.

When **we** use
wooden
products,
we continue to
store **carbon**.

Plant a tree

Use wood

Protect our
forests
